Morgan, P, (PI, Duke University)		1.0 Mo academic
Bianchi, S. and Sanders, S (Co-Directors, U. Maryland)	\$154,537	Annual Direct Costs

Title: Designing New Models for Explaining Family Change and Variation

Goals: The overall goal of this project is to review existing knowledge on family and fertility change and on variation in family attitudes and behavior between women and men and among members of different race-ethnic, socioeconomic, and cultural groups. We use the reviews to identify areas in which important progress can be made through new analyses, data collection, and methodologies. We explore new ways to use existing data and new methods for studying family and fertility change to advance understanding of causal relationships. Commissioned papers and pilot projects inform recommendations for future research and data collection on family and fertility change. The project identifies eight areas for intensive study through a coordinated set of modules with intersecting memberships and synchronized work schedules. To advance scientific understanding of family change, we adopt a strategy of routine and open consultation with researchers in multiple disciplines.

Role: Co-Director

Title: The Role of Firms in Immigrant Assimilation and Labor Market Adjustment

SANDERS, SETH G. (Continued)

Goals: The primary objectives of this proposal are to understand how immigrants and firms interact in the economy and how this interaction affects both immigrant success and native-born displacement.

Role: Co-Investigator
