Faculty Affiliates and Visitors

**Dhiman Das,** External Affiliate with the Women’s Empowerment Data for Gender Equality (WEDGE) project, is working with Sonal-de Desai, Sociology, to develop a paper on women’s say in intra-household bargaining in developing countries. He is also examining inequality of opportunity in health among the aging population in India and China. Previous work includes investigating the effect of changes in welfare policies in the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 on low-skilled women’s participation in vocational education and illicit drug use.

**Anuj Gangopadhyaya,** External Affiliate at the Urban Institute, is working with Michel Boudreaux, Health Management and Policy, to examine the impact of EITC expansions on early childhood development and using linked administrative records to investigate the impact of age at school entry on education, health, and criminal activity. Their article on this topic was published in *Demography* in late 2019.

Visiting Scholars

**Jisoo Hwang** is Associate Professor of International Economics and Law, Hankuk University of Foreign Studies, Korea. She will work with Faculty Associate Judith Hellerstein during the next year on projects related to gender, family, and fertility, in contemporary societies,” Dr. Sayer noted. “Analyses of variation in daily time use patterns over time, space, and social groups is needed to advance understanding of determinants and consequences of time use for well being.” The 2020 UMD Time Use conference will give members of the growing interdisciplinary time use research community the opportunity to interact with one another and share ideas.
The WEDGE project, being led by Faculty Associates Feinian Chen and Sonalde Desai, conducted the first meeting of its Advisory Board in September.

Dr. Desai opened the event by chairing a five-person panel presentation to examine the Gender Data Landscape. Participants included Caren Grown, World Bank; Arjan DeHaan, IRDC; Sunita Kishor, ICF; Markus Goldstein, World Bank; and Liana Sayer.

A session of roundtables followed, focusing on the topics of “The Work of Counting Work,” “Intra-Household Economic Inequalities”, and “Unity and Diversity: Generating Cross-Culturally Comparable Data”.

Session Three, chaired by Feinian Chen, addressed the challenges of “Unity and Diversity: Generating Cross-Culturally Comparable Data” and included examples from SocArXiv detailed by Faculty Associate Philip Cohen.

After a break, Professor Janet C. Gornick, CUNY Graduate Center, gave the inaugural Harriet B. Presser Lecture and WEDGE keynote address, “Work, Women, and Care: What Can We Learn from Cross-National Comparisons?”

The WEDGE Advisory Board comprises 30 scholars from universities and from several governmental bodies and NGOs, including the Population Council, the World Bank, UNICEF, DHS, IFPRI, and the U.S. Census Bureau.

Seed Grant Program for 2019-20

During the Fall Seed Grant call three proposals were funded at $15,000 each.

With “Depression and contraceptive behavioral patterns: Analyzing two longitudinal studies” Julia Steinberg, Family Science, will examine the association between depression and contraceptive behavioral patterns.

“Exclusionary School Discipline and the Transition to Adulthood for a Baltimore Birth Cohort,” proposed by Wade Jacobsen, Criminology and Criminal Justice, will extend prior research by testing whether exclusionary forms of punishment, which impact adolescent development, also interfere with the transition to adulthood.

Working with Anuj Gangopadhyaya of the Urban Institute, Michel Boudreaux, Health Policy and Management, will investigate “The Impact of Family Income in the First Year of Life on Child and Maternal Health: Evidence from the Earned Income Tax Credit,” leveraging policy features of the EITC.

Spring Special Topics workshop

In addition to a 12-session seminar series, MPRC will host a workshop presentation, “Opportunities for Criminal Justice Research at the Census Bureau,” by Keith Finlay, a Bureau labor economist. This presentation, co-sponsored with the Department of Criminology and Criminal Justice, will discuss some exciting opportunities for conducting research at the U.S. Census Bureau on the criminal justice system and its interactions with the family life, education, employment, earnings, and health of the U.S. population. The Census Bureau is currently developing two data infrastructure systems that will be available for external researchers to use, either collaboratively or independently. First, the Criminal Justice Administrative Records System (CJARS), a joint project of the University of Michigan and the Census Bureau, is a growing repository of harmonized longitudinal records from justice agencies integrated into a research platform available to researchers through the Federal Statistical Research Data Center network. These data can be linked at the person-level to study the scope of criminal justice involvement and associated factors. Second, the Census Bureau is developing longitudinal infrastructure to measure the employment and earnings of criminal justice personnel. To demonstrate the types of applications available to researchers, this presentation will include new research from the CJARS project on the scope and impact of the criminal justice system.
Summer Research Fellowship Awards

**Proposal deadline: March 30**

MPRC’s Suzanne M. Bianchi Summer Research Grant program awards are intended to support MPRC graduate Student Affiliates who could benefit from summer research time or other research resources to complete work on a paper or extended abstract to submit to the Population Association of America (PAA) Annual Conference for their September deadline.

The grants carry a total award amount of $4,000, which may be spent on a summer stipend or on other research resources (such as for data purchases or travel related to research objectives). The Center expects to award two fellowships in the summer of 2020, one of which will be the Suzanne M. Bianchi Summer Research Grant.

News Update

**Faculty News**

Sonalde Desai was a panelist at the UN Population Fund conference in Nairobi, Kenya, in October 2019.

“Differential Privacy and Social Science: an Urgent Puzzle,” a working paper by Frauke Kreuter and Daniel Oberski, Utrecht University, calls for a robust interdisciplinary approach to the problem.

MPRC scholars Sangeetha Madhavan and Seung Wan Kim presented papers at the African Population Meetings and alumna Joanna Pepin.

Sonalde Desai, Feinian Chen

“Differential Privacy and Social Science: an Urgent Puzzle,” a working paper by Frauke Kreuter and Daniel Oberski, Utrecht University, calls for a robust interdisciplinary approach to the problem.

**Student News**

MPRC Student Affiliate Brittany Dernberger and alumna Joanna Pepin have published a paper in *Sociological Science*, “Gender Flexibility, but not Equality: Young Adults’ Division of Labor Preferences.”

Journal Club meets twice this Spring

The MPRC Journal Club plans two meetings this semester to follow up on highly successful Fall series. Both meetings will be held at 12:00 noon. Journal Club meetings involve the participation of a population scientist speaking about a specific publication and about the issues scholars face when approaching publication.

Research Profile

Kristen Stoebenau, Behavioral and Community Health

**Trends in Stratification of Pre-Marital Childbirth, NICHD R03**

Across the global North, as economic inequality rises, premarital childbearing and single motherhood are becoming increasingly concentrated among lower-income and less-educated women, with negative consequences for their children’s health. In sub-Saharan Africa economic inequality is also rising and family formation patterns are in flux, but we do not know if family patterns are also becoming stratified by education. This project will examine whether premarital childbearing is becoming increasingly stratified by women’s educational attainment across sub-Saharan Africa and identify the contextual factors which help explain any increasing stratification. This is important because children born to unmarried or never married mothers in sub-Saharan Africa have a higher risk of death and poor health than children born to married mothers, and in some countries the rate of premarital birth is on the rise. If the proposed project finds that premarital birth is becoming concentrated among low-educated women, it will confirm the need for targeted interventions to mitigate the effects of premarital birth for disadvantaged women and their children.

Specifically, this project will examine trends in premarital birth by education over time in countries in sub-Saharan Africa. It also will identify contextual factors that influence a divergence in premarital birth by educational attainment. Drs. Stoebenau and Madhavan will analyze Demographic and Health Surveys, nationally representative surveys conducted on average every five years across most countries in sub-Saharan Africa. The project will draw on surveys across 20 countries, including 199 subnational regions, to examine trends in premarital birth and education for women ages 15 to 34 who were born between 1965 and 1994.

The expectation is that in contexts marked by high levels of urbanization the extent to which premarital birth diverges by education will be accentuated; and in contexts marked by gender inequality, and high ideal family size, the level of divergence in premarital birth by education will be diminished.
Longitudinal methods aggregate individual health histories to produce inferences about aging populations, but to what extent do these summaries reflect the experiences of older adults? The authors describe the assumption of gradual change built into several influential statistical models and draw on widely used, nationally representative survey data to empirically compare the conclusions drawn from mixed-regression methods (growth curve models and latent class growth analysis) designed to capture trajectories with key descriptive statistics and methods (multistate life tables and sequence analysis) that depict discrete states and transitions. They show that individual-level data record stasis is irregularly punctuated by relatively sudden change in health status or mortality. Although change is prevalent in the sample, for individuals it occurs rarely, at irregular times and intervals, and in a nonlinear and multidirectional fashion. They conclude by discussing the implications of this punctuated equilibrium pattern for understanding health changes in individuals and the dynamics of inequality in aging populations:

“Exposures to advantage and disadvantage indeed accumulate over the life course. Our findings, however, suggest that for individuals, functional limitations — and potentially other health outcomes — do not necessarily follow a gradual pattern and are instead characterized by general stability interrupted by sporadic change. Our findings are consistent with recent research that has highlighted the relatively high prevalence of recovery and health variability among nursing home residents, who may be expected to experience more serious health declines than the general population. Consequently, the use of gradualist longitudinal models to link exposure to disadvantage with health disparities potentially raises both methodological and substantive complications.”

2020 Spring Seminars, Workshops, and Events

A full schedule of seminars and other events is planned for spring 2020. We will begin on February 3 with MPRC Visiting Scholar Michael Bader (right), Associate Professor of Sociology & Policy at American University. He is presenting “Segregation in Place: Estimating the Contribution of White Flight to Racial Segregation in the 21st Century”. Other visitors include Yue Qian, University of British Columbia; Sara Curran, University of Washington; Richard Alba, City University of New York; Martha Bailey, University of Michigan; Leigh Sendorowicz, University of Wisconsin-Madison; Connie Gager, Montclair State University; Brian Thiede, The Pennsylvania State University; Jenifer Bratter, Rice University; and MPRC Visiting Scholar Zuzanna Brzozowska, Masaryk University & Vienna University of Economics and Business. MPRC presenters will include Amir Sapkota, Maryland Institute for Applied Environmental Health; and Marie Thoma, Family Science.

In addition to the robust seminar events, MPRC will sponsor (with Criminology) a special workshop with Keith Finlay, US Census Bureau Research Economist on February 28 (see story on Page 2). A PAA Practice Session is slated for April 20.

Awards, continued from page 1
increase in wildfire emissions on air quality and health of urban and indigenous populations in Alaska,” NASA-Goddard Space Flight Center; $270,516, 06/01/2019 - 05/31/2022
